

ReSorb

MAPS

Find your way or chart a path to improve acoustics.

Centred on any British postcode or GPS co-ordinates, your significant place becomes the focus with custom-print ReSorb MAPS whilst reducing reverberation (echo) in a room.

Current and vintage Ordnance Survey maps are available in standard, black & white or custom colour to suit your interior scheme. Or choose nautical charts, vintage and present-day; OS Explorer maps showing 3D relief; ski piste maps; London Underground maps; vintage Town Plans - highly detailed 19th century plans of London.

A 40mm acoustic core panel is wrapped with acoustically transparent fabric and printed using the latest high-quality digital technology. Choose any panel size up to 2700mm x 1200mm.

Easily fixed to most flat, solid surfaces, MAPS is ideal for self-install and provides highly effective Class A sound absorption.

MAPS

To cover a larger area or to give a more integrated look to your walls consider using our stretch-fabric system fitted by our installation team.

The printed acoustically-transparent fabric is stretched over a 25mm, 40mm or 50mm sound absorbing core and fixed in a concealed track, creating a seamless finish.

With an acoustic performance to match its looks, both the 40mm/50mm and 25mm core material provide highly effective class A and class B absorption respectively.

Acoustic Performance:
Class A & B absorber tested to BSENISO 354:2003

Fire Rating:
Core material: Class 0 tested to BS476:Part6
