

ACOUSTICS
by design

ReSorb Pebbles are manufactured from a polyether foam and are wrapped in an acoustically transparent fabric from the Blazer Lite range.

The 50mm thick Class B sound absorbers reduce echo and reverberation, while also providing an aesthetically pleasing feature in any room. ReSorb Pebbles are available in a variety of shapes and sizes, including circles, squares, stones, bubbles, clovers, drops, splats and shells.

Installation of the Pebbles is simple and can easily be undertaken without our installation team, although that service is available if required.

Fire ratings:

Polyether foam: BS 5853 compliant

Fabric: Class 1 tested
