

ReSorb Art has been created to absorb sound at speech frequencies in meeting rooms, atriums, classrooms and offices.

There is a choice of aluminium framed or fabric wrapped ReSorb Art panels.

Fabric wrapped panels comprise a 50mm sound absorbing core finished in an acoustically transparent fabric that may be either plain in colour or digitally printed with any high-resolution image.

Aluminium framed panels comprise a 25 mm or 50 mm sound absorbing core with an acoustically transparent fabric connected to the aluminium frame. Installation of the fabric requires no tools making the system ideal for changes to images or colours without the need of our installation team.
